FRONIUS DOUBLING PRODUCTION IN 2022/2023

Did you know that in the year 2022, Fronius is **almost doubling the production surface** in order to meet global demands in times of the energy crisis?

The new production lines are currently being commissioned and will deliver almost double the outputs in MW in the next weeks and months of 2023.

WHEN IDEAS BECOME REALITY: 30 YEARS FRONIUS SOLAR ENERGY

We're celebrating solar innovation at Fronius since **1992!**

While many did not believe in solar energy at first, we persisted and continued to move technology forward with commitment. This is what brought us here today: A **global leader in Solar Energy**, with social and sustainable business practices and 100% production and development still done in Europe. Read all about our success story below:

30 years success story
